

PANADES2 Extension Module

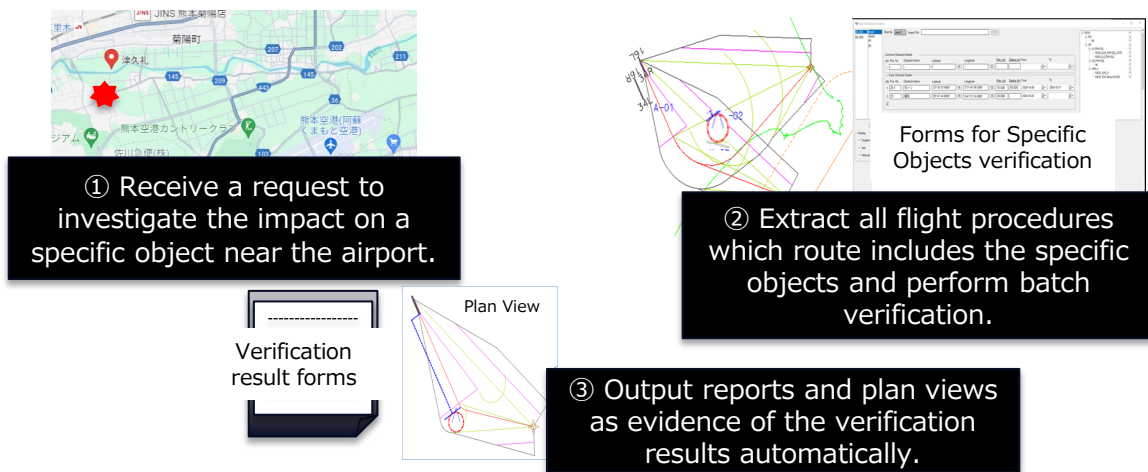

PANADES2 is a software package for Flight Procedure Design.

PANADES2 EX is an addition module to offer as the following extensions only for PANADES2.

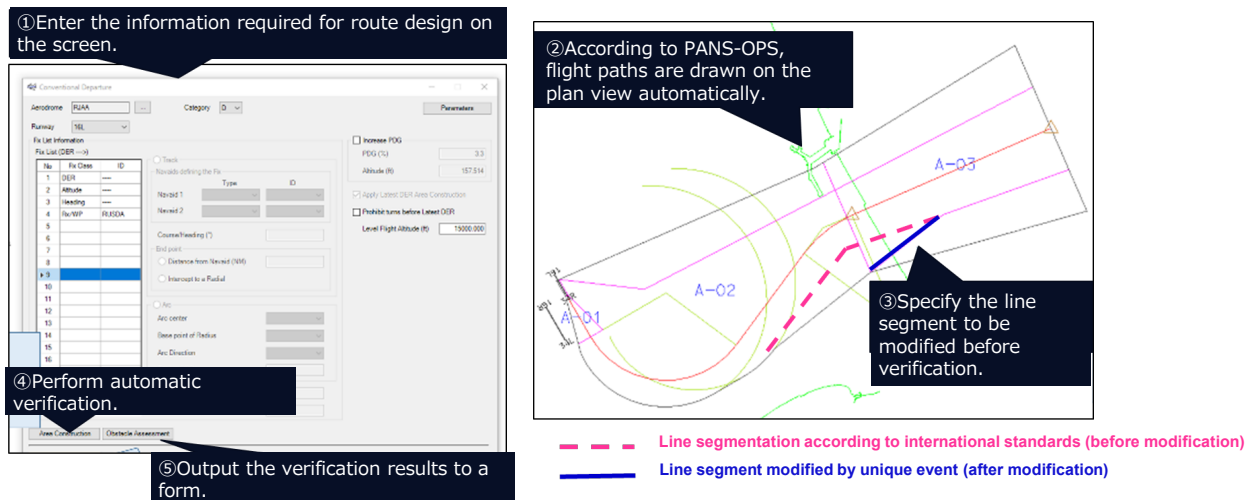

1. Specific Objects verification function (for all flight procedures)

This function is to investigate the impact of specific objects or properties around airports etc., on the designed flight procedures.

2. Modify Segment function (for RNAV Departure, RNP Approach, RNP AR Approach, Conventional Departure, Conventional Approach, Conventional Racetrack Approach, Conventional Reversal Approach)

A function that enables automatic verification by replacing the line elements of flight paths and protected areas that are automatically drawn from the input design information with line elements that are drawn manually in part due to unique events.
