

WEB APPLICATION DEVELOPMENT

NTT DATA provide a one-stop-shop where several facilities come together to collaborate. The teams deliver an End-to-End approach, starting from business strategy/IT consulting up until Application Maintenance. Projects are aiming to offer our customers a differential value and deliver a more efficient and quality software.

APPLICATION STRATEGY

NTT DATA provides a comprehensive, total lifecycle approach, enabling you to systematically identify and pursue opportunities for modernization. We also help you roll out plans to ensure a smooth transition.

Strategy and Inception

NTT DATA provides consulting services and defines strategic goals for evolving ideas into an application. We help enterprises to identify requirements and collect customer experience including interface design for an effective user journey.

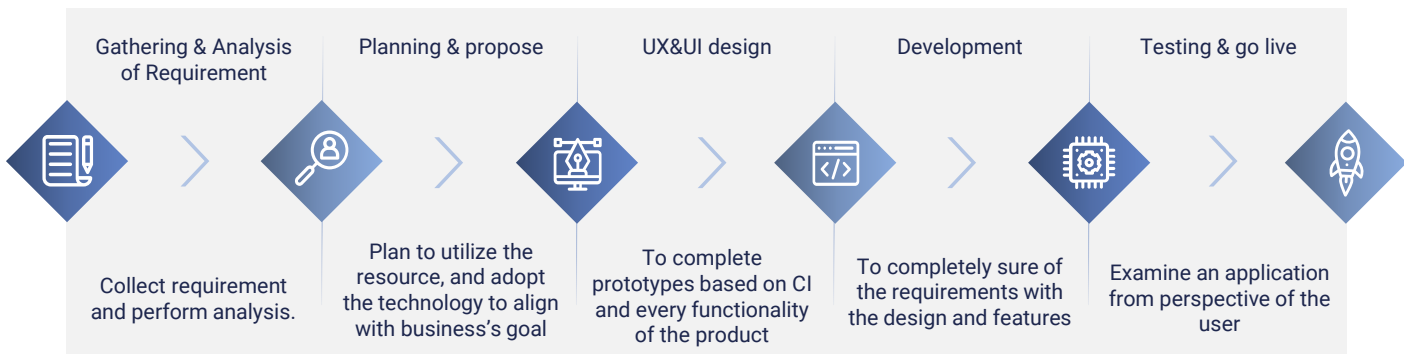

Construction and Implementation

We develop and integrate three parts, i.e., backend, API and application (front-end), that are best suited for your mobile application and validate quality based on power standard of testing criteria.

Release and Maintenance Support

Following the application's launch on Appstore and Playstore, we constantly monitor usage through mobile analytics platforms and measure the application's success. We provide prompt support and ensure that your application stays on top of technology and updates for new platforms.
